At the top right corner of the page, you will see a link "Download pdf. e italiano". Anand Kumar, "Switching Theory and Logic Design" PHI., 2008. REFERENCES: 1. Zvi Kohavi, "Switching & Finite Automata theory" TMH., 2nd Edition., Q: Change the DateTime value in custom action filter I'm trying to update the DateTime value in a custom action filter. I'm using the mvc 4 and

I want to get the date value from the querystring, and do something like: `DateTime lastDatedTime = DateTime.Now; lastDatedTime = DateTime.Parse(Request.QueryString["dt"].ToString());` Then use the lastDatedTime variable in my custom action filter. I already tested the querystring using `Response.Redirect()` method and I used the method mentioned in the accepted answer of this question to get the querystring value. But I can't understand how to use the `DateTime.Parse()` method in the code that I wrote. Can anyone help me?

A: Assuming you have a `DateTime` property on your action filter, you can assign the value returned by `DateTime.Parse` directly to your property: `public class MyCustomActionFilter : ActionFilterAttribute { public DateTime Date { get; set; } public override void OnActionExecuting(ActionExecutingContext filterContext) { base.OnActionExecuting(filterContext); Date = DateTime.Now; } public override void`

`OnActionExecuted(ActionExecutedContext filterContext) { base.OnActionExecuted(filterContext); } }` If your filter is for a particular controller, then you'll want to cast your controller to your custom controller type: `public class MyController : Controller { [MyCustomActionFilter] public ActionResult Index()`
