Category:Oracle software Category:Windows-only softwareQ: How to find out if array is null or empty in javascript I have the following code: function validate(test){ if(test.errors){ alert(test.errors); } } test is an array of objects. If there is no validation error, test.errors is set to null. But at some point when a validation error occurs, and I want to alert that error, test.errors is an empty array. How can I check if it is null or empty? A: You may try to look at the length property: function validate(test){ if(test.errors){ if(test.errors.length > 0){ alert(test.errors); } } } I hope it helps. Morphological and biochemical changes in experimental dentine hypersensitivity. Dentine hypersensitivity (DH) is a common dental condition in which exposure to strong tactile stimuli causes a painful sensation of a short duration. It is often accompanied by reversible or irreversible changes in dentine, termed alterations in the morphology of the dentine tubules, and this phenomenon has received substantial interest recently. Investigations in laboratory animals have shown that treatment with substances or procedures that block calcite deposition, reduce the opening of the dentinal tubules or cause histological changes in dentin in response to sensitive stimuli can help in the development of 3ef4e8ef8d
