

---

A USB webcam is a digital camera device built into the body of a computer, typically on a laptop computer. An USB webcam can be seen as a digital video camera. They are an affordable choice, especially for portable computers, since they plug right into a computer. Some models of USB webcams are wireless, or use a mobile broadband connection (usually 3G or other mobile data network) to transmit the video. USB Webcams are used to transmit pictures directly to a computer monitor, and most are also able to capture video. On many operating systems (Linux, Unix, macOS, and Android) a USB webcam driver is required to use the camera, and the USB Video Class (UVC) driver is often used.
