With the world's fastest growing number of schoolchildren, Singapore is fast becoming a leading digital country. It's all in the classroom. While the rest of the world is waiting for the post-Brexit economy to turn up, Singapore's digital growth is gathering pace. And it's all thanks to schools. The country's education system has always been innovative. From a five-year plan in the 1960s to a more flexible school calendar in 2018, Singapore's approach to education has adapted as the country's demographics and demands have evolved. Now Singapore's digital innovations are accelerating. And the key driver is education. There are now more than 1.4m registered schools in the country, and education minister Ong Ye Kung said in his 2018 budget that the government will spend \$22.9bn on schooling next year. The government estimates that by 2030, 10m students will be studying in Singapore's schools. That's a 15% increase in the number of children in schools and a 30% increase in their average age, compared to 2010. In other words, Singapore schools are in a state of transformation. If they can grow up and grow a "digital brain", then perhaps the future of Singapore can be accelerated. The school-to-work pipeline According to the Singapore government, 95% of Singapore

Here, the term "rearward" used in this specification means that a driver refers to the direction of travel of a vehicle. Further, in a case where images are displayed on a display, an enlarged image may be displayed by enlarging the size of an image to be displayed. Here, the term "enlarged image" used in this specification means an enlarged (zoomed-in) image of an image displayed on the display and the term "zoomed-in" used in this specification means a state where a portion (predetermined number of pixels) of an original image displayed on the display is enlarged to a predetermined size. In the following explanation, images displayed on the display may also be referred to as "displayed images". In this way, by displaying images of a rearward road on the display, a driver is allowed to recognize an object at a position at which the vehicle is traveling as well as an object ahead of the vehicle and understand the surrounding environment of the vehicle even when the vehicle is traveling at a relatively high speed. Therefore, it is possible to ensure safety at the time of traveling of a vehicle by correcting the behavior of the vehicle. Further, it is also possible to 2d92ce491b
