Browsing for a thread on the subject, I stumbled upon this helpful thread: Mr.FishIt for WoW - floating quit button on logout 16 Nov 2014 / fish. Flushing the client is the only way I know of to reset the client and thus prevent crashes. MrFishIt will sit there until you hit a fish and then the bot will provide you with 11:00 pm Fire[F] build [W] (16/13/20).u I did the steps below and it has been working flawlessly ever since. Thank you so much! Can i confirm the steps you have listed are correct in order to get this working on WoW 3.2.2?.. If anyone can help me with this I would really appreciate it. [Jahat Taheri](There are a number of ways you can "flush" the WoW client: You can press F2 (use the alt-printscreen shortcut), select Shutdown or Log Off and then press Enter. If you're in the desktop, you can select Shutdown from the taskbar's context menu or choose the Shut Down option from the Start menu. The equivalent for Windows 10 is to press the Windows key + X. The next step is to select Restart.

If you're in the desktop, you can restart by pressing the Windows key + R. If you're using your mobile device, you can restart by tapping the Back Arrow twice or by selecting the Reboot option from the Settings menu. If you're playing in an offline game, you should be able to quit from your character selection screen, if you have one. Gameplay: 3 (max) Remote: 3 (max) Throw: 4 (max) Cast Range: 4 (max) Range: 4 (max) Speed: 4 (max) Temperature: 4 (max) Duration: 5 (max) Part of the reason that others don't offer the same customization as Omniworks, is because they chose to implement every feature that people wanted, or at least, people who were willing to spend time making the bot. This makes it much more difficult to have just one bot with a bunch of features like Omniworks does, since the writer would have to write all those features into the bot itself, if they didn't already exist in the game. The options that Omniworks offers are the "basic" options that pretty much everyone is asking for.
