Hack Pack for Wii 4.3e.zip Numerical studies of the flow and heat transfer in a rigid-walled channel with a moving heater. The present study investigates the flow and heat transfer behavior of a fluid in a rigid-walled channel with a rectangular moving heater using axisymmetric multiphase lattice Boltzmann method (MP-LB) for a two-dimensional flow problem. The previous studies on the flow and heat transfer behavior of a fluid in a rigid-walled channel with a moving heater are based on a one-dimensional (1D) fluid model and a three-dimensional (3D) analytical solution. However, the MP-LB model is capable of representing the complex flow and heat transfer behavior of a fluid in a rigid-walled channel with a moving heater using a two-dimensional (2D) solution. The parameters for the numerical analysis are the flow rate, width of the
