

What am I missing? Where should I start my inspection? Update: I've also tried upgrading to the latest trunk (v3.0.0) and get the same error in the check-in. Error: Error from server at Problem and error messages can be posted to A: After reading a little bit more about it (see this thread on eclipse forums) it looks like this is a known issue. Fix for this is on the release train. The latest release train (3.9.1) released on 2018-01-23 fixes it. Have a look at: Release Train 3.9.1 If you can't use the latest release train yet, you can still go to Eclipse release page and search for the name of your Eclipse version and then follow their instructions. Q: Add a field to all objects in an array I have this structure (in JavaScript): [{ id: 123, latitude: 32, longitude: 32, content:... }, { id: 123, latitude: 32, longitude: 32, content:... }, { id: 123, latitude: 32, longitude: 32, content:... } ] I would like to add a new field to each object of the array that returns the array (the array of values of the id field and have the results in this format: [123: [123,32,32]...]) The result that I want is this: [{ id: 123, latitude: 32, longitude: 32, content:... [123,32,32]:... }, { id: 123, latitude: 32, longitude: 32, content:... [123,32,32]:... }, { id: 123, latitude: 32,
