Avenida Mais do Hemein: pode ver a edição em A: Using the facet_wrap parameter from the ggplot2 base library. library(ggplot2) library(gridExtra) df 1. Field of the Invention The present invention relates to a method for forming a buried gate structure of a semiconductor device and, more particularly, to a method for forming a buried gate structure of a semiconductor device that enhances the characteristics of a device. 2. Description of the Related Art With the trend toward high integration of semiconductor devices, the width of a gate line, that is, the distance between two neighboring gate lines must be reduced. However, a serious drawback of a short gate line or an inter-gate distance, is that the device characteristics (e.g., a threshold voltage, resistance) of a gate line are degraded. In order to enhance the characteristics of a device, a buried gate structure, which is similar to a sidewall spacer but formed in a self-aligned manner, is used.
