Exit Media Preview is a FREE tool developed by Jan Deldicque (eliteXp) that will improve the display of videos on your computer. It will let you customize several aspects of the thumbnailing process. Quickly finding a specific clip among tens or hundreds of files stored onto a drive may be somewhat difficult, especially if there are many similarities insofar as the name, size or format are concerned. Those who choose to guide themselves using the thumbnails generated by the system may also be deceived because not always are these previews brought forth. In some cases, due to performance bottlenecks (small amount of free space on the drive, numerous large files in the loaded folder, etc), all you'll get is an icon shown instead of a thumb. To mend this issue, there's the possibility of using a third-party tool that will enhance the capabilities of Windows Explorer in this respect. One such utility is the one called Media Preview, which aims to bring lots of improvements to the thumbnailing function of the operating system. Very easy to install, this program doesn't come with a GUI of its own since its role is to integrate with the OS. Instead you will get a configuration window with several tabs which contain all the customizable features of the software. The first choice you are faced with when accessing this area relates to the balance between speed and quality. If you activate the customization of this setting, you will be able to decide whether you want your thumbnails to be loaded as fast as possible, as accurate as possible or anywhere in-between.
