The new HyperMotion system requires no extra hardware and no physical sensors, just a PlayStation 4, a PlayStation Camera and the PlayStation Move controllers. For the first time on PS4, the Move controllers have been split into two smaller units, allowing for easier handling and a higher tracking threshold and accuracy. The dual PlayStation Move controllers also feature an analog stick built into each analogue control stick, giving players more options with stick controls. Together these innovations help to power unprecedented realism in the world's top videogame franchise. "We've been excited for this next generation of FIFA since before launch day, so it's fantastic to finally see it in action for players," said Sebastian Kehl, Creative Director of FIFA. "Our goal for FIFA on PlayStation was to take gameplay closer to real life by capturing the play, passion, intensity and emotion of the sport. This new technology, with PlayStation Move already a familiar staple on our consoles, are critical in giving fans the most authentic and captivating FIFA experience yet." FIFA 21 was the first video game to feature full motion capture (FMC) in a videogame, recreating the high-intensity and thrilling football gameplay. In FIFA 22, the Move technology has been further enhanced to capture "HyperMotion", capturing the style of real-life football. This new level of fidelity improves the way players feel in control of the ball during normal gameplay and turns virtual football into an experience that feels more like the real thing. HyperMotion technology will be implemented in all modes in FIFA 22, including Career Mode, all FIFA Ultimate Team Seasons and FIFA Street. In Career Mode, HyperMotion gives a sense of control and freedom to players as they perform and interact with the ball during possession-based football. In FIFA Ultimate Team Seasons, players from current and historic leagues are recreated and players can feel genuine emotion and passion as they control

their favourite players. Player attributes such as intelligence, strength, stamina and speed are re-created with HyperMotion, revealing the true abilities of the players from the past. In FIFA Street, a new addition to the series, players can perform real football tricks, use corner flags to set-up opponents and use recovery controls to generate real-time momentum. In addition to this, other gameplay features will be enhanced with HyperMotion Technology. Players can now more accurately judge the flight of the ball using a new "Quick Feet
